Conferenceseries.com organizing Genetics & Molecular Biology Conferences in USA, Europe, Australia and other prominent locations across the globe. We organise Genetics & Molecular Biology Meetings in the fields related to Tissue Science, Regenerative Medicine and Stem Cell Research. Metabolomics is the scientific study of chemical processes involving metabolites, the small molecule intermediates and products of metabolism. Specifically, metabolomics is the "systematic study of the unique chemical fingerprints that specific cellular processes leave behind", the study of their small-molecule metabolite profiles. The metabolome represents the complete set of metabolites in a ... Recent research has shown that the microbiome — a collection of microorganisms, including bacteria, fungi, and viruses, living on and in a host — are of extraordinary importance in human health, even from conception and development in the uterus. Therefore, to further our ability to diagnose disease, to predict treatment outcomes, and to identify novel therapeutics, it is essential to ... Systems biology is the computational and mathematical modeling of complex biological systems. It is a biology-based interdisciplinary field of study that focuses on complex interactions within biological systems, using a holistic approach (holism instead of the more traditional reductionism) to biological research.. Particularly from year 2000 onwards, the concept has been used widely in ...
