

Download Osha Safety Manual For Construction

Construction Safety Manual OSHA requires all construction companies to develop and implement a written safety and health program. A program should describe the whole of the company's safety and health activities. Construction is a high hazard industry that comprises a wide range of activities involving construction, alteration, and/or repair. Construction workers engage in many activities that may expose them to serious hazards, such as falling from rooftops, unguarded machinery, being struck by heavy construction equipment, electrocutions, silica dust, and asbestos. If you are a contractor or in the construction trade, this is the safety manual for you. It starts with our Standard OSHA Safety Manual (490 pages) which covers the minimum OSHA standards for nearly all industries. Rather build it yourself? If you're looking for a safety manual template, a good place to start is with OSHA's small business handbook. This handbook is provided to owners, proprietors and managers of small businesses by the Occupational Safety and Health Administration (OSHA), an agency of the U.S. Department of Labor.
