8.7 gettimeofday: Wall-Clock Time. The gettimeofday system call gets the system's wall-clock time. It takes a pointer to a struct timeval variable. This structure represents a time, in seconds, split into two fields. The tv_sec field contains the integral number of seconds, and the tv_usec field contains an additional number of microseconds. This struct timeval value represents the number of ...According to IDC, over 170,000 new servers were shipped in the first quarter of 2003. That also means that there were potentially more than 170,000 people like you charged with administering these systems without the proper knowledge or training to do so.
