Read this article if you want to get an overview of the tech trends in 2018 including programming languages trends, big data & software architecture trends. Lisp (historically LISP) is a family of computer programming languages with a long history and a distinctive, fully parenthesized prefix notation. Originally specified in 1958, Lisp is the second-oldest high-level programming language in widespread use today. Only Fortran is older, by one year. Lisp has changed since its early days, and many dialects have existed over its history. A programming language is a formal language, which comprises a set of instructions that produce various kinds of output. Programming languages are used in computer programming to implement algorithms.. Most programming languages consist of instructions for computers. There are programmable machines that use a set of specific instructions, rather than general programming languages.
